**EPOTUFF ES-83**  
HEAVY DUTY INDUSTRIAL • FAST DRYING HIGH SOLIDS  
**TWO-PART • SLIP-RESISTANT**

## Application of Epo Tuff ES-83-2

### Application of Epo Tuff ES-83-2 Slip Resistant High Solids Epoxy on a concrete ramp to an underground parking garage.

- 1 Preparation.** Clean surface with degreaser to remove oil residues. Remove loose and peeling material by power washing or other suitable method. See "Instructions for use sheet."

When using a five gallon kit, there is sufficient capacity to receive the resin, cure and aggregate in the one five gallon pail. See data sheets for amount of time available for application of product once two parts are combined and before setting.

- 2 Pre-mixing** of Resin and Cure (catalyst) using dry wall power mixer before addition of anti-slip aggregate. Scrape total contents out of cans into mixing pail.

- 3 Addition** of ES-83-2 anti slip additive supplied with product into pre-mixed resin and cure. Builders sand is not recommended. It is too soft and fine and will give a poor profile and durability.

If mixed product is too stiff, add a small amount of ES-83 Thinner to improve flow.

If ES-83 Thinner not available, use minimum amount of Xylol (NOT recycled) or Mobil Solvesso 150. Trowel application not recommended.

It will tend to flatten the profile and apply coating too heavily. To speed up cure time, ES-83 Accelerator can be added at this point.

When using a two gallon kit, a third larger container is required for mixing and addition of anti - slip aggregate.

- 4** Apply to floor surface using a 10 m.m. ( 3/8") nap roller.

Phenolic or plastic core rollers recommended to prevent softening of a cardboard core in conventional rollers leading to poor and uneven coating transfer to the surface.

For larger unbroken surfaces 18" roller kit with 20" tray is recommended for speed of application. Available from your supplier. •

- 5** Finished application of one full coat of No Skidding Epo Tuff ES83 in gray to concrete parking ramp floor. •

- 6** Close up of floor of ramp showing one full coat and existing grooves in concrete surface. •

- 7** Products recommended for job. ES83 Resin ES83 Cure. Anti slip Aggregate ES83 Thinner.

Recommended tools. For larger unbroken surfaces 18" roller kit with refills, cage frame and 20" tray.

For smaller surface areas or trim along edges of walls use 9" rollers with deep well trays.

To preserve the re-use of the tray it is recommended that a garbage bag or similar is slipped over the tray first as a sleeve and the coating then poured into the tray. •

#### PLEASE READ AND FULLY UNDERSTAND LABEL AND MSDS BEFORE USING.

**Important:** Seller's and manufacturers only obligation shall be to replace such quantity of the product proved to be defective. Neither seller nor manufacturer shall be liable for any injury, loss or damage, direct or consequential, arising out of the use of or the inability to use the product. Before using, user shall determine the suitability of the product for the intended use, and the user assumes all risk and liability whatsoever in connection therewith. No statement of recommendation not contained herein shall have any force or effect unless in an agreement signed by officers of the seller and manufacturer. Buyer assumes all risk and liability associated with disposal.

No Skidding® products are in use around the world in hotels, warehouses, factories, shopping malls, public transit systems, airports, hospitals and senior care, office complexes, restaurants, day care, schools, fitness clubs, government and military facilities.

*The most complete range of slip injury prevention products in the World.*
